Coated UltraThin Long Paint Protection Blade

UltraWiz® 51C2-M

UltraWiz® Coated UltraThin Long Paint Protection Blade 51C2-M

1" Cut Length
Our most popular cut length
Use this blade for the majority of
auto glass removals

Other cut lengths available:

51C1-M — 3/4"
51C3-M — 1 1/4"
51C4-M — 1 1/2"

UltraWiz® Coated UltraThin Paint Protection Blades The 51C0 Series

The Coated UltraWiz® UltraThin Paint Protection Blades are the strongest, thinnest, coated coldknife blades available! Many Technicians today wrap duct tape, electrical tape or Velcro® on the backside of our UltraWiz® cold knife blades to guard against scratching and damaging pinchweld paint. A well-intended remedy, many times with limited performance. UltraWiz® has developed a special resilient, durable coating that is soft and yet long wearing. Our coated blades are 40% thinner than our original series and as a result of the manufacturing process stronger. The coating protects automotive paint from scratches and damage while cutting out windshields or back glasses with exposed pinchwelds. The coating is applied heavily to the backside of the 51C0 Series Paint Protection Blades where it is needed, but very thin on the inside surface which goes against the glass. This feature is critical because of the limited clearance between the glass and pinchweld due to new vehicle designs. With enough clearance for the blade between the glass and body, the concerns about scratching and pinchweld paint damage are reduced.
